

Reports

In 2024, more than 250 **data-sharing** activities and 19 **Dashboards** were carried out, accompanied by the analysis of 18 **datasets** and the preparation of 9 **detailed reports**. These efforts reflect the ongoing focus on utilizing data for various purposes.

The next slide provides examples of these reports, showcasing the range and depth of the work conducted

Examples

Analyze Practitioners Classification Ai Model

The objective of this Report is to assess the performance of the Practitioner Classification AI model by evaluating its accuracy, precision, and recall in categorizing practitioners based on medical field, specialty, and other relevant attributes.

Graduate Performance Analysis

This report presents an Exploratory Data Analysis (EDA) of board graduates, focusing on their demographics, performance trends, and passing rates across exam sections. Key insights include the distribution of graduates by specialty, year, and attempt, as well as an in-depth evaluation of their scores and passing statuses to identify patterns and areas for improvement.

CME Hours Report

This report analyzes Continuing Medical Education (CME) hours over the past five years, highlighting trends, participation, and progress to support improved engagement and outcomes.

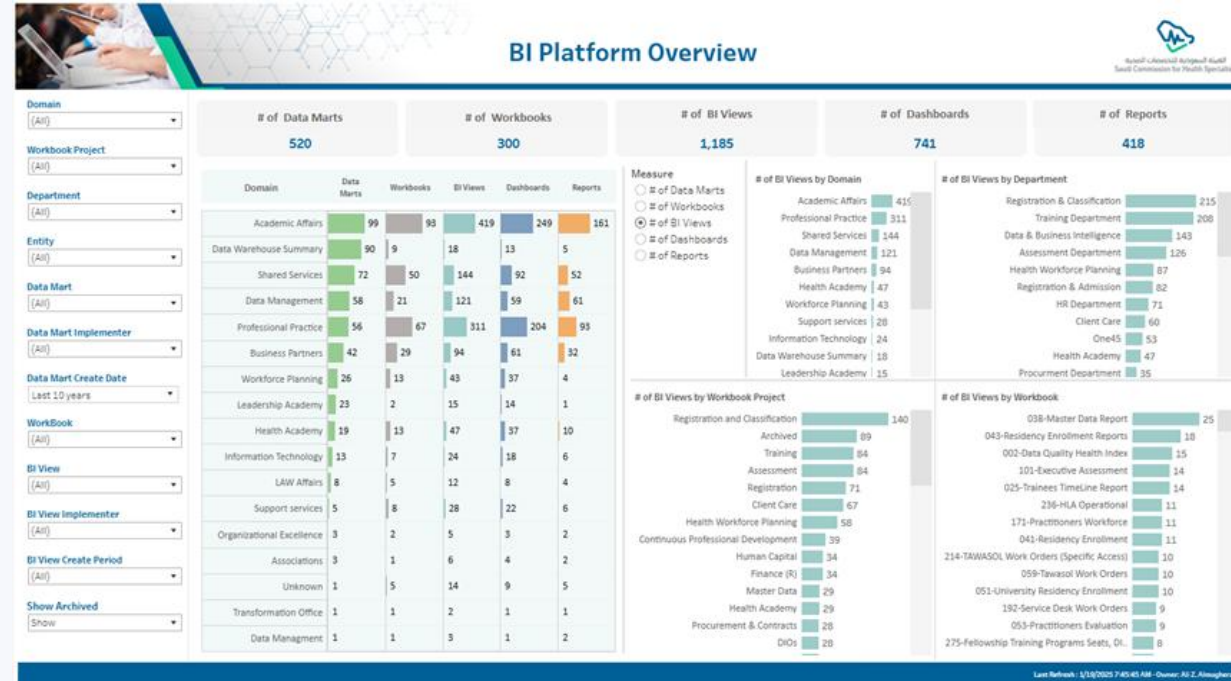

Centers Report

This report assesses the strengths and weaknesses of center graduates, focusing on their exam performance over the past years to identify areas for improvement.

Dashboard

THANK YOU.
